## Program Overview:

The Redwood Community Health Network (RCHN) Performance Improvement Program (PIP) offers financial incentives to Sonoma County member health centers in order to improve clinical quality and outcomes, improve patient experience, build clinically integrated network infrastructure, and decrease total cost of care for the population that RCHN members serve. RCHN's PIP program is a risk pool based performance incentive program.

## Guiding Principles

1. All incentive measures chosen will be in order to:
  - a. To reduce unnecessary utilization of services or reduce patient costs
  - b. To improve the quality of health center care delivered
  - c. To improve patient experience
  - d. To increase utilization of preventive services
2. Measures are based on community need
3. Measures are aligned with national standards

## Eligibility:

Health center members of RCHN are eligible for PIP if they participate in joint contracting between RCHN and Partnership HealthPlan and if the health center reports results to RCHN. Health center members must maintain adequate access to care and primary care utilization. In order to monitor this health centers will provide RCHN access to their information on Partnership Health Plan's Partnership Quality Dashboard (PQD).

## RCHN Support for Quality Improvement:

Health centers receive support for quality improvement through Redwood Community Health Coalition (RCHC)'s Population Health Programs including RCHC's HRSA Health Center Controlled Network grant activities. These include:

- Medical Director/CMO peer meeting: the venue where standardized clinical guidelines are developed to improve clinical measures
- RCHC's shared clinical decision support tools to support standardized clinical guidelines within the electronic health record: templates, order sets, alerts, recalls, reports, etc.
- Analytics and reports to support health center reporting and RCHC evidence based clinical initiatives
- Documented best practices for health center outcome measures: published to the RCHC website
- Conferences and trainings: published to the RCHC calendar
- Quality Improvement Leads peer meeting: the venue where best practices are captured and shared

- Data Standards and Integrity Council (DSIC): The Council’s mission is to improve data governance, standardization, and management across the PHCs, and identify priority RCHC standard reports.
- Data Analyst Leads peer meeting: the venue where health center data leads are trained on RCHC standard reports and data validation
- Clinical work groups are formed to address particular areas of health on an as needed basis. These groups are made up of RCHN staff, content experts from health centers and other stakeholder organizations, and make recommendations to the Medical Directors for standards in clinical practice.

### Program timelines:

- The PIP program runs on an annual period beginning January 1 and ending December 31.
- Measurement periods for clinical quality measures are for the 12 months preceding the end of the reporting period unless otherwise noted in the measurement description.
- Health centers report all improvement measures electronically to RCHN quarterly by the end of the month following the quarter’s close. For those health centers not using Relevant, reports will need to be submitted to RCHN and the source query and supporting data may also be requested.

### Governance:

RCHN staff develop and administer the PIP program to be consistent with industry performance incentive programs, including selection of the outcomes measurement set with defined targets. In the development and administration of the PIP program, RCHN adheres to federal and state laws, and guidance. RCHN staff collaborates with internal and external stakeholders for program feedback including the following groups:

- RCHN Membership – CEOs of health centers
- RCHC Medical Directors/CMO of health centers
- RCHC Quality Improvement peer group – Quality leads of health centers
- Partnership HealthPlan of California

### Code Sets and Reporting Instructions:

All clinical quality improvement measurements are based on standard code sets. If available the measurement will be based on the CMS eMeasure code set which can be obtained through the National Library of Medicine at [NLM Value Set Authority Center \(VSAC\)](#) and are posted on the RCHN website. Measures not included in the eMeasure code set will be standardized using HEDIS specifications and code sets. All measures will be reviewed and standardized as needed by RCHC’s Data Standards and Integrity Council.

RCHN publishes reporting instructions annually and posts them on RCHC’s website.

## Clinical Quality Measure Targets:

Measure/Results	HTN – BP control	DM <9	Colon Cancer Screening	6 WCC by 15 months
<b>TARGETS</b>				
2014 Target	55%	65%		
2015 Target	61%	71%		
2016 Target	64%	71%		
2017 Target	65%	71%	40%	
<b>2018 Targets</b>	<b>65% full points 62% ¾ points 59% half points</b>	<b>71% full points 63% ¾ points 55% half points</b>	<b>40% full points 36% ¾ points 32% half points</b>	
<b>2019 Targets</b>	<b>67% full points 64% ¾ points 61% half points</b>	<b>71% full points 63% ¾ points 55% half points</b>	<b>41% full points 37% ¾ points 34% half points</b>	
<b>2020 Proposed Targets</b>	<b>70% full points 67% ¾ points 64% half points</b>	<b>71% full points 65% ¾ points 60% half points</b>	<b>44% full points 40% ¾ points 37% half points</b>	<b>50% full points 45% ¾ points 40% half points</b>
<b>2019 PIP PERFORMANCE</b>				
Q1- 2019 Average	71.1%	67.5%	46.8%	
Q2 - 2019 Average	73.6%	68.7%	46.1%	
Q3 – 2019 Average	75.0%	69.6%	45.9%	
Q4 – 2019 Average				
<b>BENCHMARK COMPARISONS</b>				
HP 2020	61.2%	83.9%	70.5%	N/A
QIP Targets 2019	71.0% (full pts) HEDIS 90 <sup>th</sup> percentile 65.8% (partial pts) HEDIS 75 <sup>th</sup> percentile	70.3% (full pts) HEDIS 90 <sup>th</sup> percentile 66.9% (partial pts) HEDIS 75 <sup>th</sup> percentile	58.7% (full pts) 48.8% (partial pts) HEDIS 50 <sup>th</sup> Percentile	No target for 2019 projected target for 2020 64%
UDS CA – 2018	65.6%	65.0%	45.7%	N/A

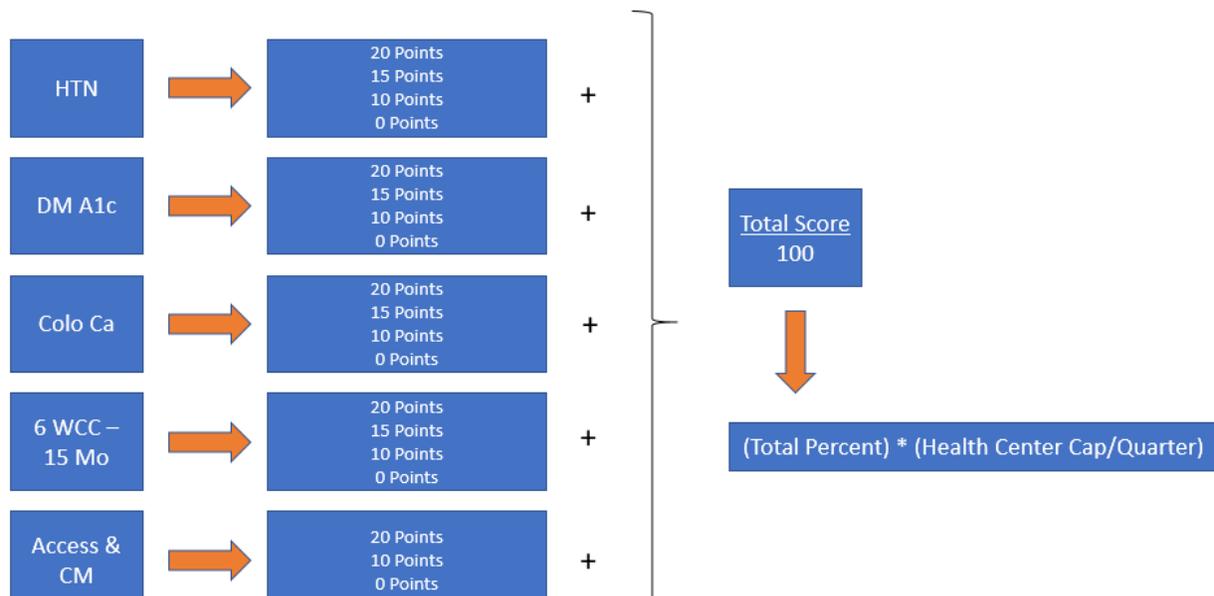

## Payment:

### 1. Quarterly payment

RCHN will calculate a maximum payment (CAP) to each health center based on a measure of health center volume from the Uniform Data System from the prior calendar year.

Payment amounts for the PIP program are calculated by adding the total points achieved for each quality measure. The individual points earned divided by 100 to calculate the percent of total funds available to each health center that will be paid.

Funds will be distributed quarterly to health centers no later than 45 days after the reporting period closes.

### 2. Relative improvement points

At the end of Q4, health centers ending the reporting year at 70 - 89% will be able to earn additional funds if the health center achieves >10% relative improvement in any one clinical measure. Qualified health centers that achieve the improvement threshold will receive 50% of the funds in reserve for that health center.

Calculation:

$$\frac{(\text{Current year performance}) - (\text{previous year performance})}{100 - (\text{previous year performance})}$$

### 3. Unearned funds

Unearned funds during the program year will roll over each quarter for an opportunity to earn the incentive when measures are met.

For unearned funds at the end of the program year:

Unearned funds following the determination of relative improvement, will roll over to the aggregate pool for the future year or will be utilized for projects and programs which will support quality improvement throughout the network.

## Clinical Quality Improvement Measure Definitions

### 1. Hypertension Control

#### Rationale

Uncontrolled hypertension leads to coronary heart disease, congestive heart failure, stroke, ruptured aortic aneurysm, renal disease, and retinopathy. For every 20 mmHg systolic or 10 mmHg diastolic increase in blood pressure, there is a doubling of mortality from both ischemic heart disease and stroke (Joint National Committee on Prevention, Detection, Evaluation, and Treatment of High Blood Pressure 2003).

Heart disease and stroke accounted for more than 25% of deaths in Sonoma County in 2013 and continues to account for more than 25% from 2014-2017 (Sonoma County Department of Health Services 2019). Over the year 2013, the percentage of Heart Disease related deaths increased by nearly 6%. In Sonoma County 7% of adults were found to have heart disease which is higher than the state average and increased from 2012 – 2014 (Sonoma Health Action 2015).

Better control of blood pressure has been shown to significantly reduce the probability that these undesirable and costly outcomes will occur. The relationship between the control of hypertension and the long-term clinical outcomes is well established. In addition to preventing cardiovascular events and deaths, controlling hypertension would also result in cost savings to total cost of care for patients with hypertension (Moran 2015).

Measure alignment: CMS165, NCQA 0018, PHP QIP 2020, UDS 2020

#### Measure description

Percentage of patients 18-85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled during the measurement period.

Program Performance Thresholds:

- Full points – 70%
- $\frac{3}{4}$  points – 67%
- Half points – 64%

#### Numerator definition

- Patients 18–85 years of age as of the end of the reporting period whose most recent office blood pressure was <140/90 mm Hg.

#### Denominator definition

Patients 18-85 years of age, who had at least one medical visit, who had a diagnosis of essential hypertension within the first six months of the measurement period or any time prior to the measurement period.

#### Exclusions

- Patients with evidence of end stage renal disease (ESRD), dialysis or renal transplant before or during the measurement period
- Patients who have been pregnant during the measurement period
- Patients who were in hospice at any time during the measurement year

## **2. Blood Sugar Control in Diabetes**

#### Rationale

People with diabetes are at increased risk of serious health complications including vision loss, heart disease, stroke, kidney failure, amputation of toes, feet or legs, and premature death. Average medical expenditures for people with diabetes is 2.3 times higher than for people without diabetes. (CDC 2017).

The percent of people in Sonoma County living with diabetes has been increasing steadily from 2011-2015 especially amongst those over 65 years of age (Sonoma Health Action 2015). Sonoma County Health Centers average rate of control of diabetes ( $A1c \leq 9$ ) in 2016 was 68% much lower than the Healthy People 2020 Goal of 83.9% (HRSA 2016).

Randomized clinical trials have demonstrated that improving control of A1c levels correlates with a reduction in microvascular complications (retinopathy, nephropathy and neuropathy) in both Type 1 and Type 2 diabetes (Diabetes Control and Complications Trial Research Group 1993). Improved diabetes control also results in decreased cardiovascular complications and potentially reduces the cost associated with them.

Measure alignment: CMS122, NQF0059, PHP QIP 2020, UDS 2020

#### Measure description

Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c  $\leq$  9.0% during the measurement period.

Program Performance Thresholds:

- Full points – 71%
- $\frac{3}{4}$  points – 65%
- Half points – 60%

Numerator definition

Patients with most recent HbA1c level (performed during the measurement period) is  $\leq$  9.0%

Denominator definition

Patients 18-75 years of age with diabetes with at least one medical visit during the measurement period.

Exclusions

Patients who have been pregnant during the measurement period

Patients who were in hospice at any time during the measurement year

### **3. 6 Well Child Checks by 15 months**

Rationale

Assessing a child's physical, emotional and social development is important. Behaviors established during childhood such as eating habits and physical activity, often extend into adulthood. Well child visits provide an opportunity for health centers to provide prevention services such as immunizations screenings, and counseling to influence health and development. (NCQA 2019)

Measure alignment: HEDIS W15, PHP QIP 2020, CA Managed Care Accountability Set

Measure description

Percentage of established children 15 months old who had 6 well-child visits with a primary care physician during the first fifteen months of life.

Program Performance Thresholds:

- Full points – 50%
- $\frac{3}{4}$  points – 45%
- Half points – 40%

Numerator definition

Children who received six or more well-child visits with a PCPC during their first 15 months of life. (CPT codes)

#### Denominator definition

Children who have had at least one visit after 2 months of age who turn 15 months old during the measurement year.

#### Exclusions

Children who have been in hospice for any part of the measurement year

### **4. Colon Cancer Screening**

#### Rationale

Colorectal cancer is the third leading cause of cancer death in the United States (American Cancer Society 2019). If the disease is caught in its earliest stages, it has a five-year survival rate of 91%. Colorectal cancer screening of individuals with no symptoms can identify polyps whose removal can prevent more than 90% of colorectal cancers. Studies have shown that the cost-effectiveness of colorectal cancer screening is \$40,000 per life year gained (American Cancer Society 2015).

The incidence of colon cancer for people over 50 years of age, in Sonoma County is higher than the state average (Healthy Communities Institute 2016). The average screening rate for Sonoma County health centers in 2018 was 46% which is below the Healthy People 2020 goal of 70.5% (HRSA 2016).

Measure alignment: CMS130, NQF0034, PHP QIP 2020, UDS 2020

#### Measure description

Percentage of adults 50-75 years of age who had appropriate screening for colorectal cancer.

#### Program Performance Thresholds:

- Full points – 44%
- $\frac{3}{4}$  points – 40%
- Half points – 37%

#### Numerator definition

Patients with one or more screenings for colorectal cancer. Appropriate screenings are defined by any one of the following criteria:

- Fecal occult blood test (FOBT) or Fecal Immunochemical Test (FIT) during the measurement period
- Flexible sigmoidoscopy during the measurement period or the four years prior to the measurement period

- Colonoscopy during the measurement period or the nine years prior to the measurement period
- FIT-DNA (Cologuard) during the measurement period or the two years prior to the measurement period
- CT Colonography during the measurement period or the four years prior to the measurement period

Denominator definition

Patients 50-75 years of age with a visit during the measurement period

Exclusions

Patients with a diagnosis or past history of total colectomy or colorectal cancer

Patients who were in hospice for any part of the measurement period

## Access and Care Management Measures

### 1. Access Measurement

Health centers will create a report to reflect new patient wait times which they will run to collect information monthly on the first Tuesday of each month at any time of day. This report will reflect the 1<sup>st</sup> available appointment for a new patient. This data will be collected at each licensed site and quarterly, the reports will be share with RCHN. Health centers using Relevant may opt to report electronically to RCHN by notifying RCHN of what report to use. This data will eventually be collected by RCHN staff without health center involvement. For those health centers that RCHN is unable to access the data, full points can be gained by reporting to RCHN monthly on the 1<sup>st</sup> Tuesday of each month.

New patient wait time will is the number of days until the first available appointment for a new patient with no current urgent problems.

Program Performance Thresholds:

- Full 10 points – 100% reported each quarter using the table below

Site Name	Measurement Month	Number of Days for New Patient Appointment
	Month 1 in quarter	
	Month 2 in quarter	
	Month 3 in quarter	

## 2. Care Management – Transition of Care

Health Centers will report quarterly on one question related to transition of care and submit a copy of the care or action plan as described in quarter 4:

Quarter 1: Does your health center have a notification system in place? (RCHC can support getting that in place). Please describe the system:

Quarter 2: Describe your health center’s process for outreach to patients who are transitioning between health center and hospital, emergency room, SNF:

Quarter 3: Describe the staff that work with patients who are transitioning, including FTE, title, and brief background:

Quarter 4: Please provide a copy of the care plan or action plan used in your transition of care process (no PHI):

### Program Performance Thresholds:

- Full 10 points – 100% reported each quarter using the table below.

## Data Validation and Audit Procedures

RCHN will validate data against prior program performance for each quarter. RCHN will randomly audit health center values throughout the year. In cases when RCHN staff have direct access to health center data systems and electronic health record, RCHN staff will conduct the audit independent of the health center and notify the health center if there are any issues that need to be corrected. In cases when RCHN staff does not have direct access to the health center data, RCHN staff will request the source query and supporting data from the health center. RCHN may choose to contract with a third party to conduct data validation and audit functions. Health centers that fail to comply with validation and audit or who have open or unresolved validation or findings will not be eligible to receive funds from the PIP program until they are in compliance.
